## Jagenberg Converting Solutions GmbH acquires FMP Technology GmbH

**Krefeld.** As of April 5, 2023, Jagenberg Converting Solutions GmbH, based in Bocholt, Germany, acquires 100% of the shares in FMP Technology GmbH, based in Erlangen, Germany.

Jagenberg Converting Solutions GmbH (JCS) is a German machinery company of the Jagenberg Group that supplies turnkey systems for processing of sophisticated web-shaped materials for battery and decorative applications.

FMP Technology GmbH (FMP) specializes in the production of high-precision and customized slot dies for customers in the battery, hydrogen and electronics industries. In this context, FMP has in-depth expertise in the design of slot dies, diffusion-optimized dryers and simulations of these processes. In process engineering, FMP complements the competencies of JCS in the design of equipment for electrode production. In the future, FMP's portfolio of innovative slot dies will be even more closely coordinated with JCS's range of equipment, thus offering our customers an additional integrated solution.

In cooperation with renowned German universities and institutions, FMP is conducting research on numerous projects with the aim of improving the efficiency of roll-to-roll production as well as the quality of battery electrode and fuel cell production. This knowledge, coupled with specific short-cycle development projects, is another component in JCS's strategic orientation to continue to be a strong development partner with innovative turnkey solutions for its customers. Battery production is subject to continuous development cycles to increase the efficiency and quality of both the production process and the product. The acquisition of FMP enables an even closer integration of the two companies and offers our customers the advantage of direct access to the latest research results and short realization times for innovations ready for series production.

**About Jagenberg Converting Solutions GmbH:**

Within the Jagenberg Group, Jagenberg Converting Solutions GmbH offers turnkey solutions from a single source as a reliable, competent and innovative partner. The company bundles the competencies and many years of experience of more than 500 employees from the companies within the Jagenberg Group and supplements these with solutions from strategic partners as required. The focus of business activities is on the supply of services required for the processing of sophisticated web-shaped materials for battery and decorative applications.

**About FMP Technology GmbH:**

Founded almost 20 years ago as a spin-off of Friedrich-Alexander-Universität Erlangen-Nürnberg, FMP has a strong foundation in fluid dynamics and fundamental process know-how of various coating and drying processes. Since 2018, the business focus has been on battery, hydrogen and printed electronics. The portfolio focuses on FMP's core product: Customized slot dies, which are individually tailored to each customer's coating process. In addition, coating stations, fluid delivery systems and patented diffusion-optimized convection dryers are supplied to industry as well as universities. FMP therefore also offers pilot plants for roll-to-roll and sheet-to-sheet processes.
