

Press release

Jagenberg Group at the ITMA 2023 trade show

A strong competence team in the textile sector

Krefeld, June 8, 2023. Jagenberg Group will demonstrate its comprehensive and decades-long competence in the textile sector at the ITMA in Milan, Italy. From June 8-14, 2023, the Group invites visitors to its joint booth B303 in Hall 18 at the most influential textile and apparel trade show. Three group companies will be showcasing their powerful and reliable machines for the processing and finishing of web-shaped textiles as well as the patented "floating roll" based on Küsters technology.

Traditional companies and many years of experience

The framework of the trade show presentation illustrates the character of Jagenberg Group: a worldwide team of companies with many years of experience and proven solutions. To underscore their expertise in textile wet finishing, the group companies Jagenberg Textile GmbH, Küsters Calico Machinery Pvt. Ltd. and Zima Corporation are sharing a booth at this year's ITMA.

Jagenberg Textile, for example, has focused on the production of foulards and high-efficiency squeezing devices, including the floating roll. Küsters Calico stands out for its expertise in mercerizing (with and without warp) and washing. Proven wet-on-wet concepts and the combination of washing principles, such as Super Flush, let customers achieve the desired results here. In addition, the company has technologies for dyeing using its "floating roll" technology.

By integrating specialized companies, the Jagenberg Group can offer a comprehensive range of services for producers and finishers of web-shaped textiles – all over the world.

Seite 1 von 2

This includes the full range of necessary services from planning and development of individual solutions to life cycle services that accompany the entire life of the machines.

About Jagenberg AG:
